# Vintage Synth Bank!™

This CD-ROM offers lot's of great sounds at a very low price.

The experts at 3D-Sounds have done great volume sampling, offering yet another palette of sounds in which to do your musical wonders. Rubber Chicken serves you as a qualified distributor of their sounds.

This CD-ROM is has been made for specifically the ASR-10/88 sampler. It may be used with the TS series with very little actual sound differential. However, with the 16-Plus, about 50% of the instruments will not load due to memory constraints, and the loaded effect with always default to HALL REVERB. Original EPS users may use this CD if they have a PC or Mac, and use the Ensoniq Disk Manager or EPSm software. The same restrictions as the 16-Plus apply as well.

## Direct Macros

*DirectMacro's are are unique feature to CD-ROM's. Using this booklet, you can access any sound instantly. To invoke a Direct macro, press down on LOAD, and then hit the appropriate number on the keypad. To load correctly, your CD-ROM Drive must be set to SCSI #4. Loading Banks, the same applies - set your SCSI number to #4.*
