# Chicken CD-ROM™ II

Chicken CD-ROM represents the latest in sampling techniques and sound manipulation. We hope you enjoy the sounds contained within.

This CD-ROM is made for both Ensoniq samplers, the EPS 16-Plus and the ASR/TS owners. As a result, there are several directories optimized for each instrument.

**16-Plus file-type:** These have sounds saved using an EPS 16-Plus, but not necessarily sampled with the 16-Plus. The sounds can fit in a fully expanded 16-Plus, and are programmed with the effects contained in the 16-Plus' ROM. In contrast, most other companies have their sounds universally in ASR file-type, which eliminates the effects settings when you play the sounds in a 16-Plus. (It defaults to Hall Reverb). The Effects Files themselves are 16-Plus file type too. ASR/TS can use these sounds as well, because some will have a different flavor to them, because of the different effects programmed.

**ASR-10 file-type:** These sounds are programmed and saved on various ASR-10's in our studio. Because of that, they have ASR-10 effects on them. 16-Plus owners can load them also (if memory permits), but their effects will default to Hall Reverb in every case.

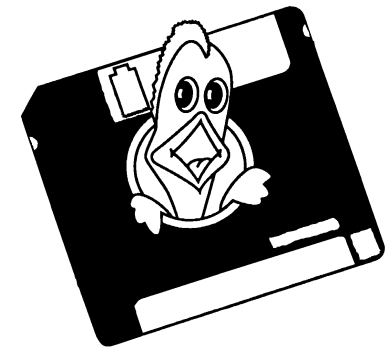

**Extended Directories:** These have larger versions of some of the sounds in other directories, and some unique sounds too. ASR-10 only, because of memory.

### Bill Sethares

*Bill is another longtime EPS/ASR samplst. These are definitely unique samples! Enthic and from the kitchen too.*

*Bio: " The exotic instruments and eclectic trash of Bill Sethares. Samples of Bolivian, Indian, and Yard Sale instruments are complemented by the Recycle Orchestra: all the sounds of the trash heap, the music of garbage bins, the harmony of the dumpsters. Here you will find broken glass, rusted metal, dented aluminum, discarded paper, and crumpled plastic. Each of the sounds was carefully recorded in full digital splendor to ensure you the finest in junkpile sounds. Nowhere will you find a more dented aluminum canophone, a more wrinkled newspaper rustle, or more jettisoned bottledrum... and where have you heard a better sample of Singling Automobile Sperm? all samples change utilize the patch selects, while the wheel and pedal modulate various aspects of the sound."*

### LiveWire

*Sampled and Programmed by Mick Seeley. Mick has sampling and programming sounds for Roland, Korg, and Ensoniq samplers and synthesizers ever since they all came out!*

*Bio: "Mick Seeley is the creative force behind LiveWire Audio, a firm that has marketed sounds for keyboards from 1985-1993. Through his programming work, LiveWire became a sound developer for all major keyboard manufacturers, including Yamaha, Korg, and Kawai. Mick's musical talents led to work with Dan Hartman, Billy Squier, Aldo Nova, Southside Johnny, Bruce Springsteen, Jon Bon Jovi, and Steve VanZandt. LiveWire still has a state of the art 20 track studio in Long Branch, NJ."*

## First Generation

Computer-generated samples from First Generation. Sampled and programmed by John Loffink.

"These samples were generated using Synthia Professional, a 16-bit software synthesizer for the Amiga. Not to be confused with sound card synthesizers, a software synthesizer allows an infinite variety of sounds to be created using techniques from analog style subtractive synthesis all the way to physical modeling. All effects from chorusing to reverb were also generated on the computer. The samples you hear on this CD-ROM never enter the analog domain until they leave the outputs of the EPS/ASR/TS."

## Quantam Acoustical/Electric

Synth-type samples.

Bio: " Here at Quantum, our philosophy is simple. We feel your sampler should be an extension of yourself. Therefore, we have paid great attention to detail while creating this special sample library for you. For example, one of the very unique features of our sample library is that every sound contains full implementation of Ensoniq's patented "patch-select" variations. Quality, uniqueness, and versatility are all important elements during our sound creation process which allows our samples to be used in any number of different sonic applications.

"Much of this sample library was created by Sebastian, our chief programmer, who has been working extensively with MIDI & digital audio in recording studios from Chicago to Minneapolis, including Paisley Park Studios. In short, we hope you enjoy your new sample library, and look forward to supplying you again with only the highest quality digital samples in the future!"

### Brothers Ryan 1

J.D. Ryan is a crazy man in New Jersey. Great off-the-wall sound effects and instruments.

Bio: "In early 1990, Jeremy D. Ryan (J.D.) established a small digital studio to pursue both musical and spoken-word comedy to advance the art of story-telling for radio and television outlets. This resulted in many written works of comedy skits from a collaboration of brothers Joe and Jim Ryan. The idea was to print to tape a narrative which was punctuated with appropriate sound effects, incidental music, and sonic surprises, for sale to "alternative" sources of audio entertainment. (radio stations, etc.). Brothers Joe and J.D. had been engaged in these kinds of activities since childhood. Brother Jim had developed a fully equipped project studio in Oakland, CA. These efforts resulted in a large library of digital samples for the EPS 16-Plus which is still the masterboard at J.D.'s home studio in the ocean resort areas of southern Delaware. Many of these samples were created for theme songs for comedy skits and other non-conventional, experimental/exploratory uses. Some of the more rhythmic renderings such as Shuffle Shoe or Rattleclack make excellent foundations when committed to sequence as a rhythm base and will inspire (hopefully) you to build upon them, ushering you into new and novel musical territories. Other sounds in this collection offer a "one-key" ready-to-go musical statement that are useful in professional soundtracks and are just plain fun."
